

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

VII. Aurora borealis, observata a *Petro Gabrij*, J. V. D. Phys. Astron. et Math. anni 1750, die 27 *Februarii*, Nov. St. *Hagæ Com.*

Read Jan. 24.  
1750.

**O**BSERVAVI tempore vespertino per-  
rarum meteoron, quæ mihi aurora  
borealis visa, referens magnam lucem, eamque for-  
mam iridis, principium fumens ab horizonte circa  
orientem, finiensque ad horizontem circa occasum.  
Culmen erat versus meridiem zenith, et fere 80 grad.  
supra horizontem; (Tab. I. Fig. 2.) latitudo autem  
prope verticem fere 2 grad. ad utramque extremita-  
tem pergens quasi cuspidatim. Medius arcus magnam  
candidamque lucem emittebat, quæ tamen ad limbos  
et magis debilis et subcœrulea apparebat.

Meteoron hoc decima vespertina maxime vividum  
conspicere, at vero post horæ quadrantem discussum  
erat. Quum autem sidera noctem belle illustrabant,  
distincte dabatur hæc, quanquam debilius, quam quæ  
extra arcum, transpicere.
